Claim 2 has been cancelled. Newly submitted claim 21 has been entered. The active claims are 1 and 3-21.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1 and 3-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Belkin (USP 6,604,125) in view of Allison (USP 6,373,848).

Details of the rejection have already been set forth in the last Office action. The details are incorporated herein by reference thereto.

As to claim 21, see lines 53-58 of column 4 in Belkin. Claim 21 is nothing more than a component list because there is no detail recitation as to how those components are being used to process data blocks of the same packet. ALU , counter and control store are basic components of a thread execution unit.

In the communication filed on 2/24/2006, Applicants argue for patentability that the claims recite processing first and second data blocks of the **same** (Applicants' emphasis) packet with different threads whereas in Belkin requests are being processed simultaneously by the threads. The Examiner disagrees. The claims recite **scheduling** (Examiner's emphasis) of a first thread to process a first block of data within a network packet and Scheduling of a second thread to process a second block of data within the network packet. The claims do not positively recite that the blocks of data are of the same packet. There is no showing in the claims as to how scheduling of the data blocks of the same packet is different than the scheduling of requests in Belkin. There is no showing in the claims as to how processing of the two data blocks of the same packet is

different than the processing of the two requests in Belkin. Applicants fail to provide argument as to why the claimed invention is patentable distinct over Belkin. Merely argue what the claims require is not sufficient to overcome the rejection. In re Nielson, 816 F.2d 1567, 2 USPQ 1525 (Fed. Cir. 1987). The court held that simply pointing out what a claim requires with no attempt to point out how the claims patentably distinguish over the prior art does not amount to a separate argument for patentability. Furthermore, The specification does not support Applicants' argument. See lines 10-12 of page 4 and the last paragraph of page 7. The specification discloses that microengine threads are assigned to process different tasks such as scheduling receive and transmit and not data blocks of the same packet.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
